- + Team Leadership and Mentoring

LEAH JANE JERVIS

SENIOR DEVELOPMENT ARCHITECT

Freelance Web Designer

 May 2020 - Present

 Freelance

In 2020, I embarked on my freelance website design journey by harnessing website building tools like Wix. Since then, I have successfully built websites for more than 75 companies, launching these websites across diverse global locations, including the UK, Ireland, Australia, Qatar, and the United States. This journey has resulted in my achievement of the Wix Partner status and had a profound effect on my career. It's improved my collaborative skills, deepening my ability to comprehend client requirements. It's also sharpened my time management, enhanced my creativity, and expanded my knowledge of design principles.

Full Stack Software Engineer

 June 2017 - December 2020

 Imosphere Ltd

● — ● — ● — ● Placement Software Engineer

Promoted to Graduate Software Engineer 2019

Promoted to Software Engineer 2020

+ I actively participated in the development, upkeep, and thorough testing of features throughout all stages of the development life cycle for Imospheres' suite of care management tools, encompassing data entry, data analytics, and form design.

+ I independently managed and assumed full accountability for the analysis, design, and successful delivery of significant tasks.

+ I played a central role in a ground-breaking project for an American company (City of Hope), which stood as the largest endeavour in the company's history. Despite intense pressures, we not only met expectations but also ensured that no deliverables were overlooked.

+ I conducted workshops and provided mentorship to onboard new software engineers for Imospheres' data entry solution.

+ Collaboratively, we engaged in pair programming to overhaul the PDF Generator, bringing it in line with the latest technologies and best practices.
